Fatal Motor Vehicle Crashes in 2018 Included a Variety of Factors

Drunk, drugged, distracted, drowsy, or a combination are forms of impaired driving and are dangerous and preventable.

2018 Alcohol-Impaired Driving Fatalities Per 100,000 Population by State

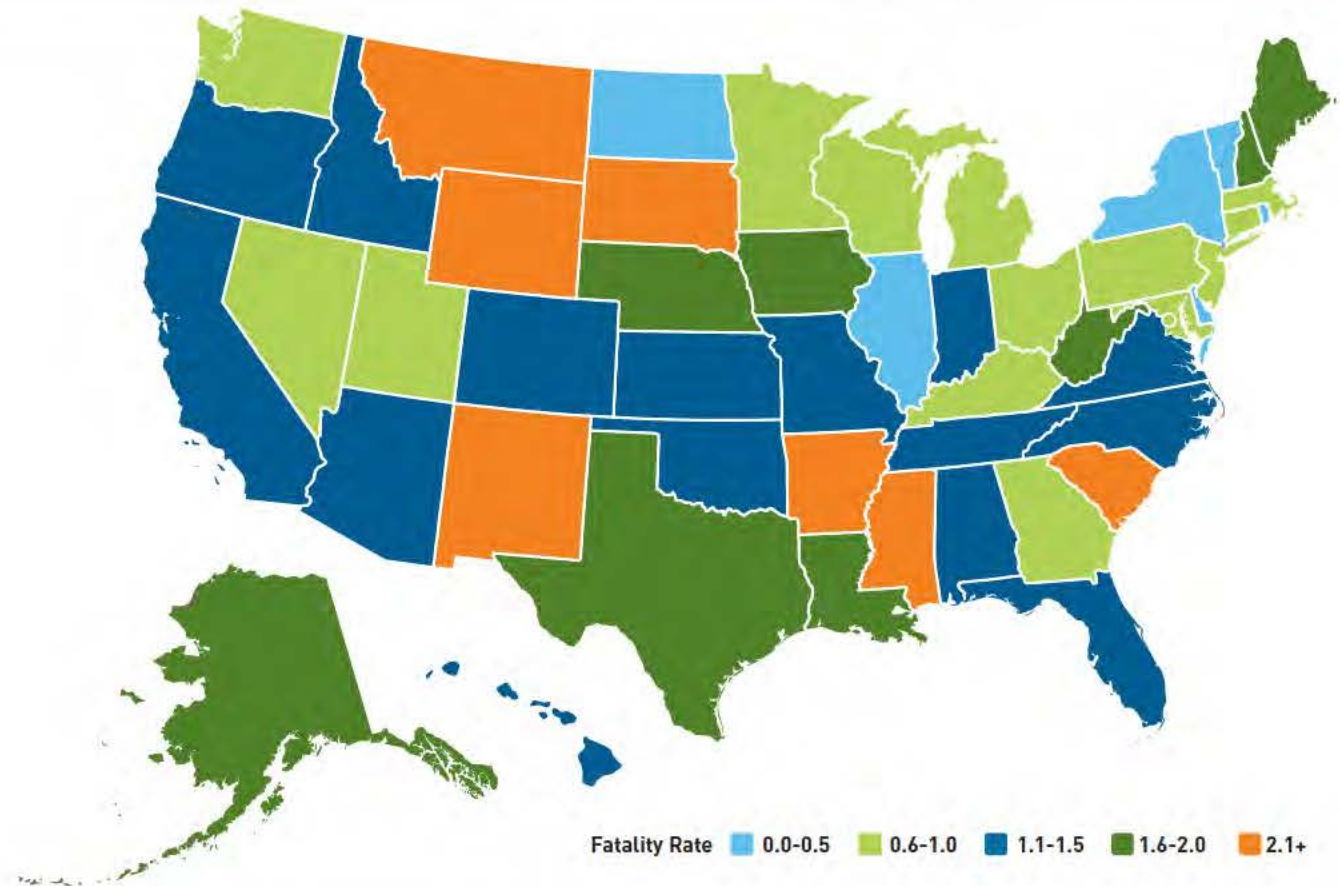

In 24 states and D.C., alcohol-impaired driving fatalities per 100,000 population were at or below the national average of 3.2 deaths per 100,000 population.

Alabama	5.0	Kentucky	3.1	Ohio	2.5
Alaska	3.9	Louisiana	4.6	Oklahoma	3.7
Arizona	4.0	Maine	3.1	Oregon	3.7
Arkansas	4.4	Maryland	2.0	Pennsylvania	2.6
California	2.7	Massachusetts	1.7	Rhode Island	1.9
Colorado	3.3	Michigan	2.7	South Carolina	5.7
Connecticut	3.2	Minnesota	1.9	South Dakota	5.1
Delaware	2.9	Mississippi	5.5	Tennessee	3.6
D.C.	1.3	Missouri	3.9	Texas	5.0
Florida	3.8	Montana	7.4	Utah	1.9
Georgia	3.6	Nebraska	3.4	Vermont	2.4
Hawaii	2.5	Nevada	2.9	Virginia	2.8
Idaho	3.3	New Hampshire	3.5	Washington	2.2
Illinois	2.4	New Jersey	1.4	West Virginia	3.2
Indiana	3.4	New Mexico	5.2	Wisconsin	3.4
Iowa	2.7	New York	1.6	Wyoming	5.9
Kansas	3.0	North Carolina	4.1	U.S. Total	3.2
		North Dakota	3.8

2018 Fatal Drunk Driving Crashes Among Drivers with a Known BAC

RESPONSIBILITY.ORG

Seven out of 10 drivers involved in fatal drunk driving crashes are high risk drivers with BAC levels of .15 or higher.

Percent of Alcohol-Impaired Driving Fatalities by BAC

Source: NHTSA, FARS ARF of Drivers with Known BAC, 11/19

Repeat Offenders Involvement in Fatal Crashes

More than one-third of drivers involved in a fatal crash who had a prior DWI* had a high BAC at the time of the crash.

REPEAT OFFENDERS BY BAC LEVEL

Source: NHTSA, FARS, 11/19

* Prior convictions only for events occurring within 5 years from date of crash. Total may not equal sum of categories due to rounding.

Holiday Traffic Fatalities by BAC Level

Drunk driving fatalities accounted for 37% of traffic fatalities during the 2018 holidays and drivers with a high BAC were involved in 69% of drunk driving fatalities.

Source: NHTSA, FARS, 11/19
 The number of whole days in the holiday period depends on the day on which the legal holiday falls. Typically, the period is 6 p.m. the night before until 5:59 a.m. the day after the holiday. Total may not equal sum of categories due to rounding.

Alcohol-Impaired Fatality

Drivers in all 50 states and D.C. are considered to be alcohol-impaired if their blood alcohol concentration (BAC) is .08 grams per deciliter (g/dL) or higher. Any fatality occurring in a crash involving at least one driver, or motorcycle operator, with a BAC of .08 or higher is considered to be an alcohol-impaired driving, or drunk driving, fatality. The term alcohol-impaired does not indicate that a crash or a fatality was the result of alcohol impairment. In producing national and state alcohol-impaired statistics, the National Highway Traffic Safety Administration (NHTSA) estimates the extent of alcohol involvement when alcohol test results are unknown.

Alcohol-Involved Fatality

Alcohol-involved fatalities are those where at least one driver, or motorcycle operator, has a positive BAC of .01 or higher. In producing national and state alcohol-involved statistics, NHTSA estimates the extent of alcohol involvement when alcohol test results are unknown.

Blood Alcohol Concentration (BAC)

BAC is measured in grams of alcohol per 100 milliliters of blood. A BAC of .01 indicates .01 grams of alcohol per 100 milliliters of blood. As of July 2004, all 50 states and D.C. have passed legislation establishing a driver with a BAC of .08 to be legally intoxicated; Utah passed a law lowering the state's BAC limit from .08 to .05 for impaired driving that became effective December 30, 2018. Additionally, 48 states and D.C. have laws that increase penalties for those convicted of driving with elevated or "high" BAC levels.

Rates per 100,000 Population

The rate of alcohol-impaired fatalities per 100,000 population is the number of alcohol-impaired fatalities for every 100,000 persons in the population being measured. For example, an alcohol-impaired fatality rate of 3.2 per 100,000 population nationally means that for every 100,000 people in the nation, there were approximately three alcohol-impaired fatalities.

Repeat Offenders

The NHTSA/FARS data records prior driving records (convictions only, not violations) for driving while intoxicated events occurring within five years of the date of the crash. The same driver can have one or more of these convictions during this five-year period. Drivers who have a prior conviction in this five-year period are reported as repeat offenders.

The information presented in this report is drawn from several databases maintained by government agencies, including the National Center for Statistics and Analysis (NCSA) of NHTSA, which compiles crash data from the Fatality Analysis Reporting System (FARS), and the U.S. Census Bureau of the U.S. Department of Commerce. This report reflects data from 1982 to the present utilizing NHTSA's multiple imputation method for estimating missing information about BAC levels for persons involved in fatal crashes, thus allowing for improved reporting of alcohol involvement statistics at any BAC level. The U.S. Census Bureau publishes state resident and civilian population estimates which were used in this report.
